

## Facts of DORA Project

Duration: Three years project launched in 6/2015.

Aim: Plan, route, assist and guide passengers from door-to door in Europe to cut total travel times by 20%.

Testing: DORA system will be tested in realistic environments by passengers between cities of Berlin and Palma di Mallorca and corresponding airports.

Investigation & testing of technologies of waiting queues and indoor location services at airport.

*This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement n° 635885.*

# DOOR TO DOOR INFORMATION FOR AIR PASSENGERS

Creating real-time routing services to reduce travel time of air passengers

✈ Scheduled & real time services

(terminal proceedings, flight connections, urban transport, urban flexible service providers)

✈ Personalized services

(routing and navigation criteria, mobility constraints)

For more information visit:

<http://dora-project.eu>

Contact e-mail:

[contact@dora-project.eu](mailto:contact@dora-project.eu)

✈ Door-to-door journey planning

(planning and connecting travel information on the land and in the air)

✈ Strategic compliancy

(static and dynamic control strategies of operators and municipalities)

✈ Guidance & navigation

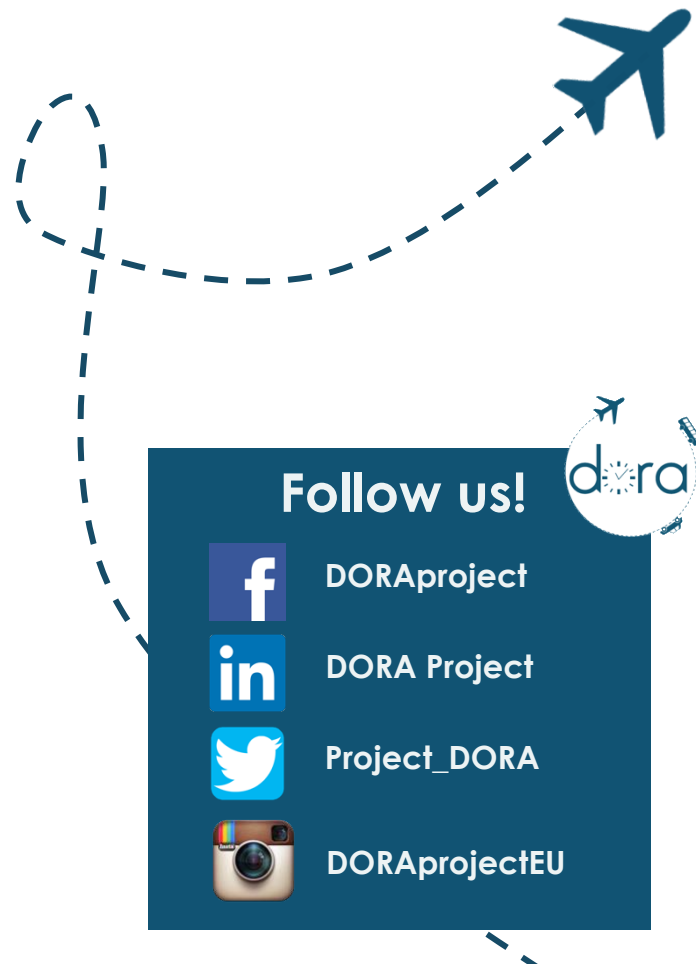

(indoor-routing, disruption, re-routing)

✈ Booking & ticketing

(access to both public and private land transportation information, booking and purchasing tickets)
